Rotom - Cargopak Ltd

Our brands

Sustainable logistics products and services

Wooden Pallets and Accessories

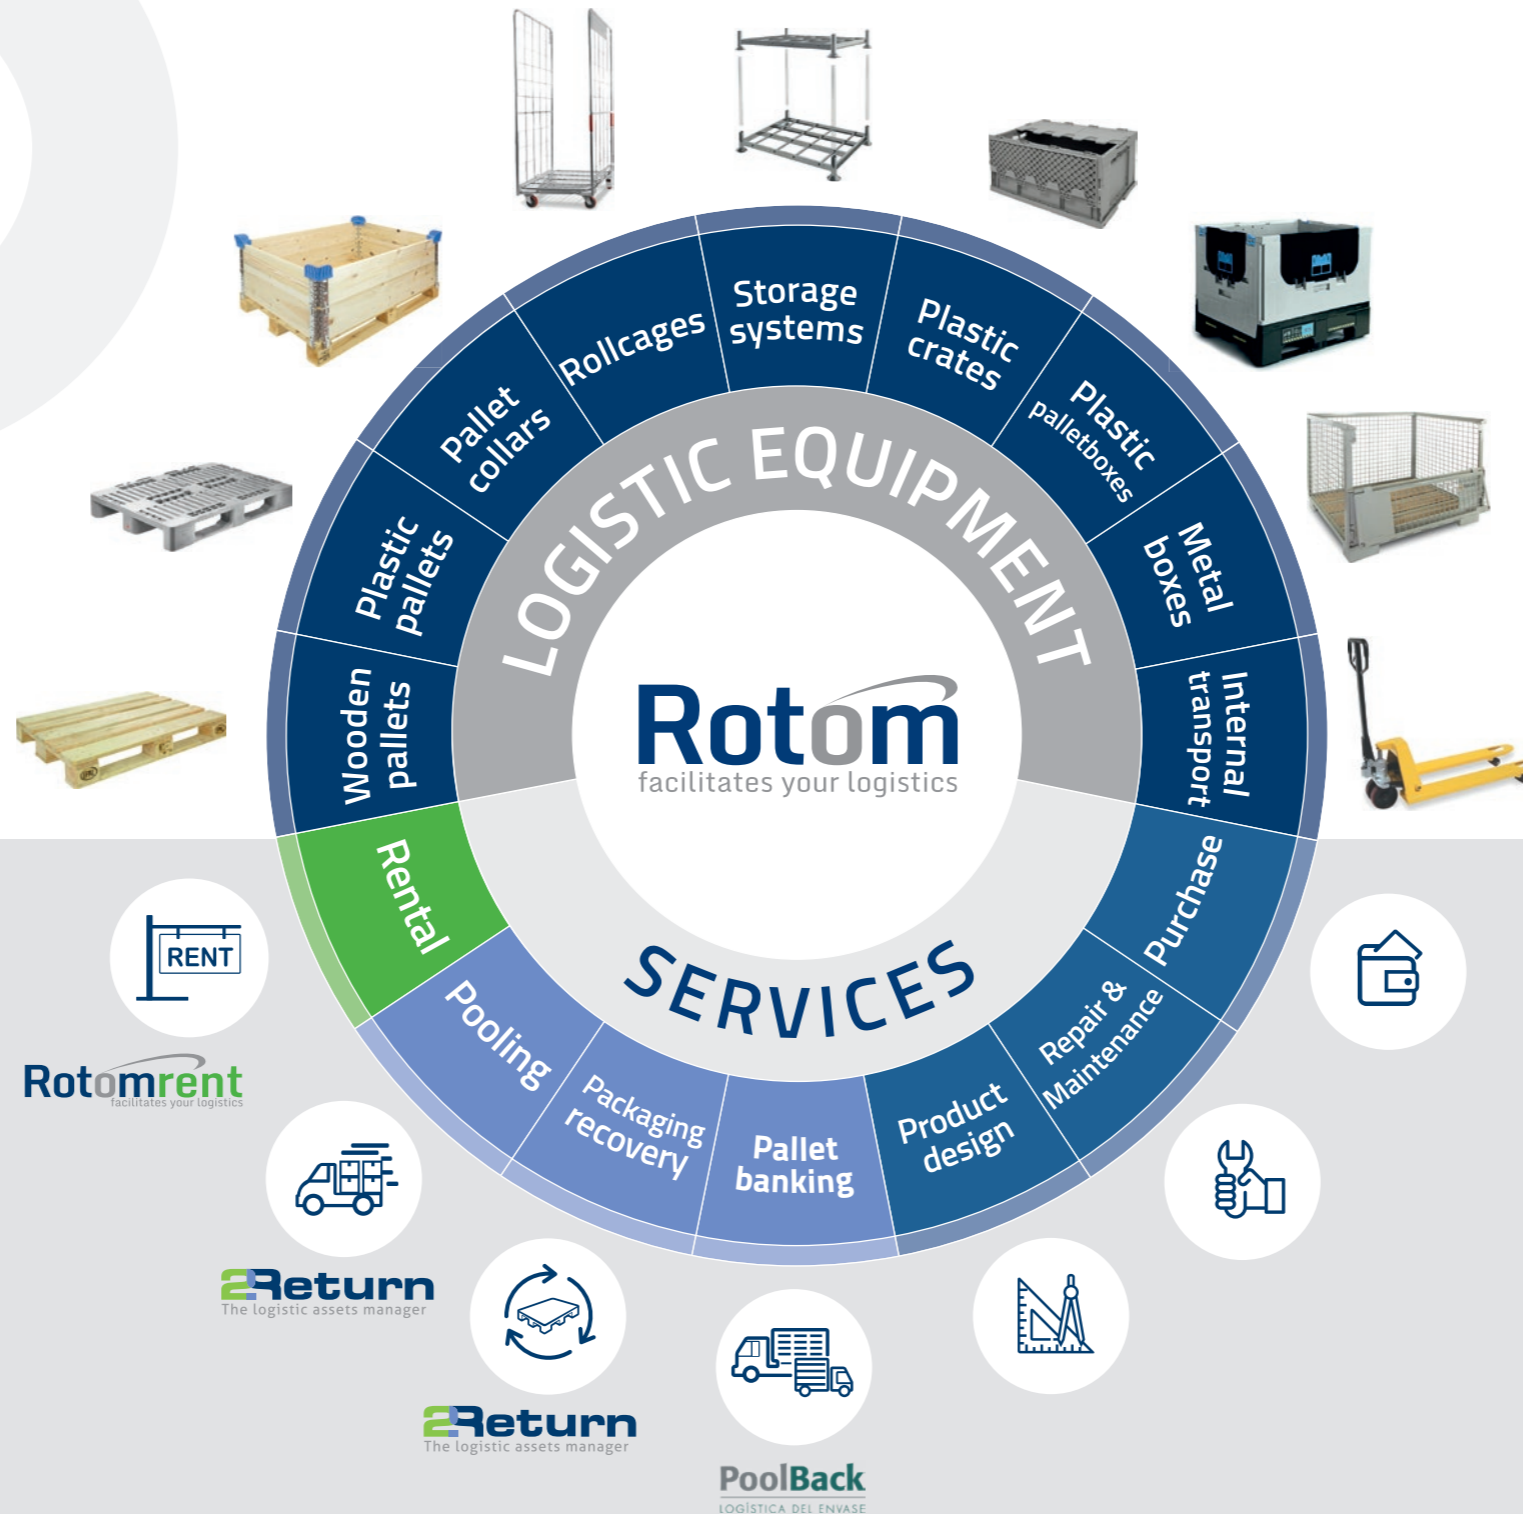

- Production of wooden pallets and accessories
- IPPC thermal treatment according to ISPM 15
- Buying and selling used wooden pallets
- Proper storage of dry products and control of KANBAN stocks.

Plastic Pallets and Accessories

Robust plastic pallets and matching plastic accessories for the transport of hygiene products.

Roll Containers

New and used, nestable and folding. With metal, plastic or wooden base. A key piece of equipment for any logistics centre.

Mobile Racks Mobilrack®

Our mobile storage systems are TÜV-certified. They ensure maximum utilisation of storage space.

Plastic Crates and Containers

Rotom supplies plastic crates and containers for transport and storage.

Metal Containers

Mesh Wire Cages, Stillages and collapsible containers. Sturdy structures for safe storage and transport.

Internal Transport

Large selection of hand pallet trucks, platform trucks and warehouse trucks that are essential for every warehouse.

Packaging Redemption

Rotom strive for Sustainability and as part of our re-use and repurpose service we can buy back any excess equipment like pallets or roll containers.

Packaging Design

Design your own packaging and increase supply chain efficiency. We offer our technical support throughout the implementation and use of your new packaging.

Repair and Maintenance

We will repair or maintain your logistics equipment. Well maintained equipment is easier to work with and safer for your employees.

Rent logistics equipment

Rotom Europe has a large number of Mobile racks, roll containers, pallets and plastic containers for hire. A proven solution during seasonal production.

Pallet flow management (pallet pooling)

Through an integrated IT system and the Rotom Europe network, 2Return takes control of the pallet circulation (pallet pool) ensuring stability and security of supply and savings. More information can be found at www.2return.co.uk

Wooden pallets

The wide range of new wooden pallets includes EPAL licensed pallets, CP pallets and, above all, a specially selected group of one-off pallets, made to individual order, whose construction and dimensions optimise costs. Thanks to a state-of-the-art drying facility, they have the IPPC phytosanitary certificate, which is required in many areas of activity and allows goods to be exported outside the European Union. We are able to make wooden pallets for you in any, even non-standard dimensions. A separate group of products are used pallets. Second-hand pallets obtained from the market are repaired by us and sorted according to dimensions and potential load capacity.

Plastic Pallets

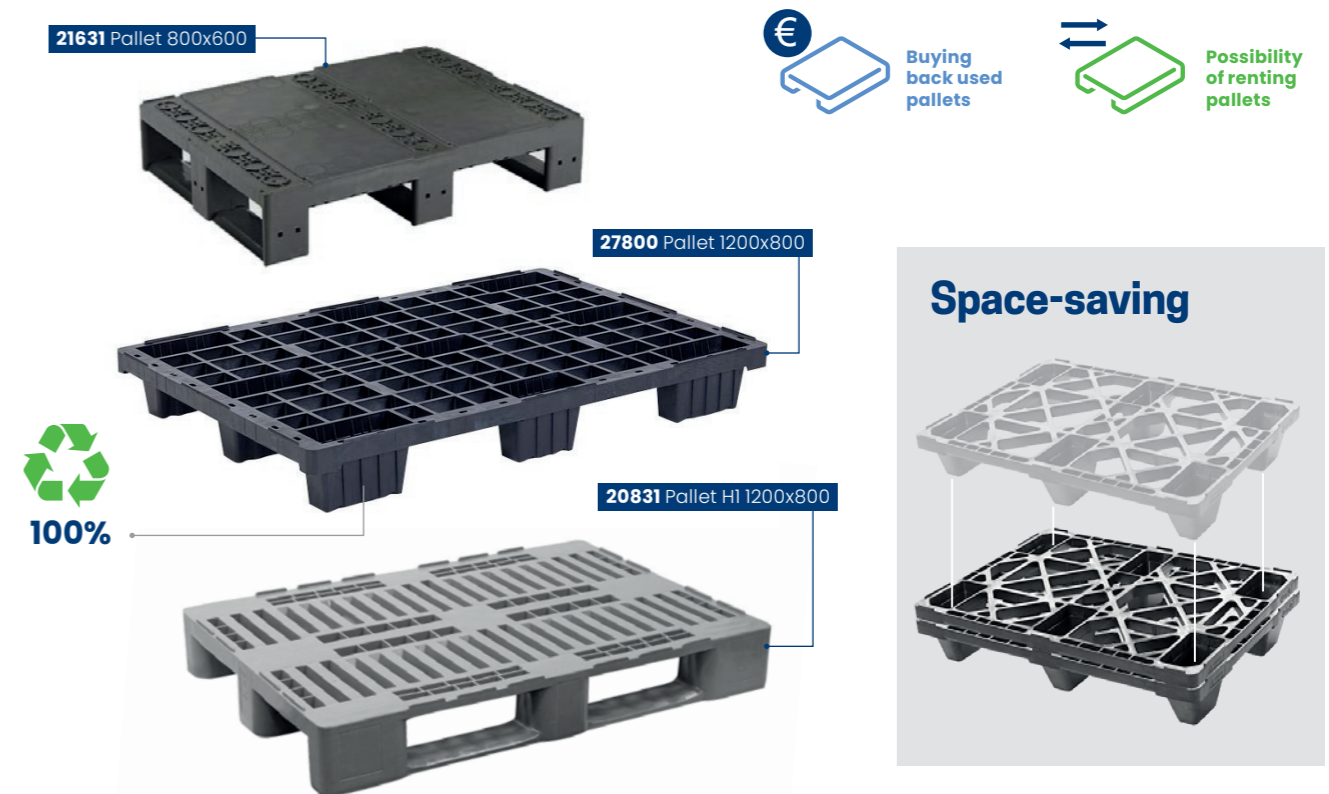

Made from high grade materials, plastic pallets allow for long and safe use in your warehouse. In addition to the standard 1200x800 and 1200x1000 dimensions, we offer container pallets, so-called "half pallets" 600x800 and "quarter pallets" 600x400. The offer is complemented by disposable pallets and those adapted for air transport. An excellent addition to plastic pallets are plastic pallet extensions, recommended for higher hygienic standards in the warehouse. In our wide range of products you will also find the very popular H1, H3 hygienic plastic pallets and full top pallets.

Automated production
Certified quality

Pallet Collars

Wooden, plastic and metal pallet collars are a simple way to protect your goods in transit. Typical dimensions are: 600x800, 800x1200 and 1000x1200mm. When assembled, the collars take up little space, reducing costs in return transport. We can also offer non-standard dimensions of wooden and metal collars for larger individual orders. Typical accessories include lids, plastic and spacer corners and dividers. The wooden collars are IPPC-certified. Second-hand wooden collars are also available in standard sizes.

Roll Containers

Roll Containers are standard equipment in any distribution centre, facilitating the packaging of goods and fast delivery. They are also used at airports, in healthcare, retail and food logistics. Our very extensive range covers all options: from the simplest 2 sided Demountable Containers to Nesting Containers, Laundry Containers, and Full Security Containers. Isothermal containers are also available, which are required for transporting and storing goods at low temperatures, ensuring freshness of food products. A wide range of accessories are available, such as roll cage straps, castors, covers and shelves.

Mobilrack[®] storage systems

The superbly simple and practical Mobilrack storage system effectively solves your storage problems. This mobile system provides rapid expansion of storage space, adapting to your possibilities. It can be assembled very quickly and when unused takes up very little space. The Mobilrack system is also very effective for storing products with very unusual sizes or shapes. Special versions are also available, e.g. with drip tray for storing liquid products, safety net or plywood base. The Mobilrack system is one of the most frequently hired products by our customers.

Plastic containers and boxes

An extremely wide range of plastic containers used in many industries. We offer various designs: open, closed, solid or perforated, stacking or nesting folding with or without lids. The containers are made of robust materials and very often meet even the most unusual needs. The most popular group are EURONORM containers and stacknest containers, which save a lot of space in storage. The range is supplemented by large 1200x800 and 1200x1000 boxes (also folding) and Tripboxes. Folding box pallets are particularly suitable for transporting large and heavy components. They reduce the return transport costs for empty packaging.

66103 Crate 1200x1000

61098 TripBox collapsible container

Full range of plastic crates

Metal containers

Robust and durable solutions for heavy products. The range includes standard and certified Gitterboxes (new and used), mesh bins and mesh and metal extensions. These solutions are very popular in the automotive industry. All extensions are ideally suited for use with wooden or plastic pallets. Stacked on top of each other, they save space in storage. Folding models complete the range. Thanks to their design, they reduce costs when returning empty containers. The galvanised and robust design ensures long-lasting protection against rust. We offer containers in all standard sizes: 800x600, 1200x800 and 1200x1000. Thanks to many years of cooperation with the best companies in the industry, we also offer non-standard metal products made to individual order.

75008 Dolly for Gitterboxes and Pallets

A range of products to make work easier in every warehouse. From the most popular pallet trucks, platform trolleys and farm trolleys to heavy-duty roll containers and dolly trolleys. All of these solutions facilitate the packing of products and the organisation of work in the warehouse. Thanks to their different designs, they make it easier to handle products with unusual dimensions, but also protect them from damage during transport. The wide range of housekeeping and stacking trolleys provides excellent support for production and packaging lines. A separate product group are wheelbarrow trolleys for transporting small parcels, but also barrels and larger goods, making it easy to manoeuvre even up stairs.

Rental of logistics products

It doesn't matter whether your business is local or international, whether you need 50 plastic pallets or 15,000 gitterboxes, whether you will use them for 2 weeks or 8 months. If you have to cope with a sudden increase in orders due to seasonality, or you have signed a new contract and have no guarantee of renewal, or you are opening a new warehouse and cannot wait weeks for the delivery of the ordered equipment, rental is the best solution to meet your customers' requirements immediately. You are in the right place to quickly hire the right products and meet the challenges while saving time and money!

We have prepared for you specially selected logistics products for hire that will successfully fit into any supply chain and any warehouse. They will ensure efficient and safe operation and fast delivery from one of our 30 warehouses across Europe will avoid downtime for your business.

Scan the code and watch the video. This will show you how we work

1. Flexibility

Only rent the quantities you will actually need. You need more - we will replenish the missing quantities immediately. You need additional, different products - we will deliver them very quickly so that you can work without disruption.

2. Wide range

Our extensive range includes carefully selected products that will fit perfectly into any supply chain and any warehouse. However, if you haven't found the perfect product, please contact us - we will certainly be able to offer exactly what you need.

3. Large stocks

We have a very large stock of products available for hire at any time. In the event of high demand for a particular product exceeding our stocks, we will replenish the missing quantities immediately.

4. Warehouses throughout Europe

Yes, we know you don't have the time. That's why fast delivery from one of our 30 warehouses in Europe is possible! In addition, if your used products get "stuck" in another country after your rental, you can easily return them (or we will pick them up) to the appropriate warehouse.

5. No unnecessary investment

Focus on increasing the efficiency of your supply chain rather than looking to finance the next purchase of pallets or roll containers with no guarantee that you will not be left with unused equipment after a period of increased production (season).

Delivery and monitoring

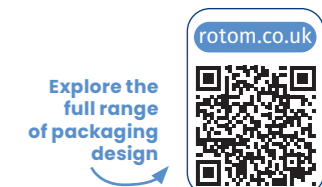

Do you have an unusual product that requires special packaging? Do you need to integrate your product packaging into your customer's production line or supply chain? Take advantage of our customised design options. With our specialists, you can create or recreate even the most complex packaging.

Our speciality is packaging made of metal or wood. Unlike plastic, these two materials give you the freedom to design even the most complex packaging. Their production is not based on the principle of very expensive injection moulds. As a result, we are able to design and manufacture exactly what you want.

More and more packaging, ranging from unusual wooden pallets, mesh containers or individual roll containers or metal containers, is being designed individually. This offers huge savings in the supply chain. It also makes your products safe during transport and storage, allowing them to be reused very often.

What does the design process look like?

Once all the information has been received and analysed, our dedicated R&D department uses sophisticated calculation programmes to create a packaging concept, a technical drawing and a 3D model, from which a prototype is created. This is then tested and, if necessary, modified. Once all corrections and tests have been made, the packaging is ready for mass production.

Recovery and circulation management of returnable packaging

Scan the code and watch the video. This will show you what you can gain

Return packaging logistics is a service that allows you to gain full control of the return packaging in constant circulation between manufacturers, retailers and customers. If you source your return packaging from customers but find the process difficult and inefficient, a return packaging management service can save you a lot of money.

Our mission is to streamline the packaging logistics process for companies by ensuring supply chain continuity at every stage. Our integrated transaction management system allows us to obtain data from all parties in the process in real time. This way, we know exactly how much and where your packaging is. We become the controllers of your packaging ensuring efficient working.

What do you gain?

- reduction in packaging costs
- sealing the circulation of your packaging
- one central point for process management
- no problems with packaging administration
- online access to all information
- product and EU regulatory support

How does it work?

- Each shipment of your packages is recorded in our system
- Our operators take control of your packaging
- We know the exact quantity and location of returnable packaging at all times
- On this basis, we provide information on the supplies/returns needed
- You only focus on shipping or receiving the return packages

Pooling of logistics products

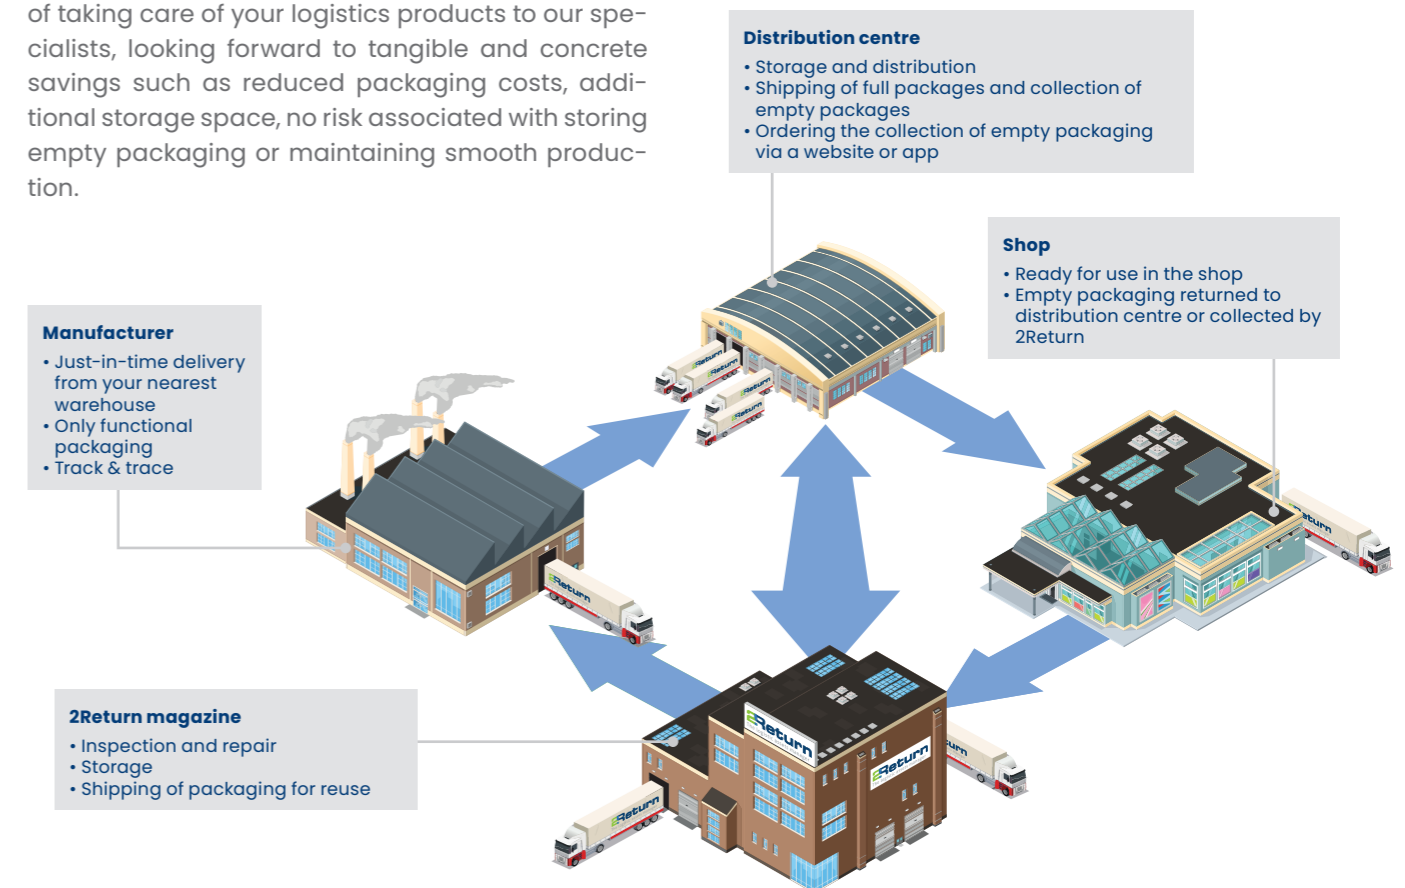

Being part of the Rotom Group, 2Return has the necessary knowledge and experience to effectively and efficiently manage the flow of packaging for even the most complex supply chain. We reduce the distance and therefore the costs generated by transport, ensure proper control of packaging quality at every point in the cycle, deliver on a just-in-time basis ensuring smooth production. Our advanced IT system will ensure process tightness by preventing uncontrolled loss of logistics products.

By working with 2Return, you can focus solely on your own business while leaving the entire process of taking care of your logistics products to our specialists, looking forward to tangible and concrete savings such as reduced packaging costs, additional storage space, no risk associated with storing empty packaging or maintaining smooth production.

What are your benefits?

Full pooling offer

- Reducing packaging costs
- No costly management of packaging
- Freeing up additional storage space
- Improving production processes through just-in-time delivery
- Standardisation of the quality control process for packaging materials

Repair and maintenance

EPAL licence

The cost of purchasing new packaging is very high. In many cases, however, it can be avoided or postponed significantly. By keeping your packaging in good condition, it will last longer, providing tangible savings as well as safety for your products.

EPAL pallets and Gitterbox metal bins

With our EPAL-certified expertise for the repair of Euro EPAL wooden pallets and Gitterboxes, you will be guaranteed that the repaired packaging conforms to the original specification. Our automatic and semi-automatic EPAL pallet repair lines guarantee the highest quality service. You will be sure that the repaired packaging is suitable for further safe use.

Scan the code and watch the video. This will give you an impression of how we work

More about packaging redemption

Packaging redemption

Do you have a lot of used packaging that you don't need, taking up valuable storage space? Don't be hasty in disposing of them and incurring high recycling costs! Take advantage of the packaging buy-back option. We will check if the packaging is still of value and make you a good offer. You can profit a lot from the buy-back!

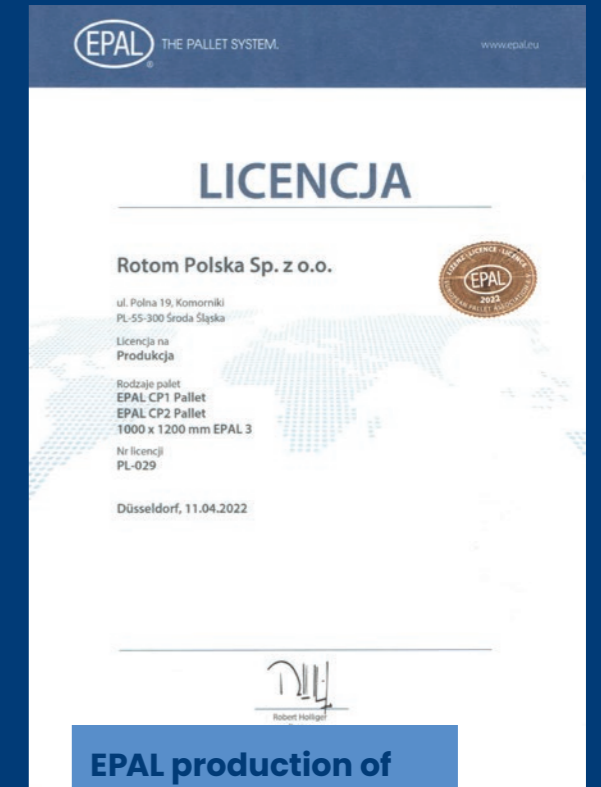

In the case of metal and wood products, we will also buy back damaged packaging.

What can we buy back?

- Wooden pallets
- Plastic pallets
- Pallet collars
- Roll containers
- Plastic containers
- Plastic crates
- Metal containers

ISO certificate

EPAL production of EPAL3 and CP pallets

EPAL repair licence

Sustainability Ecovadis rating certificate
