PRODUCT DESCRIPTION

2 sided roll cage with a folding base with a maximum load capacity of 450kg. The collapsible floor has 2 gridded insertion gates with straps that are electrolytically galvanized. The inside dimensions of the roll container are 815x632x1500mm. The height of the base is 185mm. The wheels of the rolling pallet cage have a PP plastic tread. The diameter of these wheels is 125 millimetres. There are no brakes on the wheels. Easy for transporting and storing goods. This roll container is suitable for

medium loads. Because the base can be folded in the longitudinal direction, the roll cage saves a lot of space in return transport and storage. This makes it ideal for couriers. This roll container can be fitted with any wheel from our range at your request, for example, with a brake, suitable for freezers or both. View the wheels on our site here.
