### PRODUCT DESCRIPTION

A strong transport wheel with brake and plate attachment that has a load capacity of 400 kg. The tread of the wheel consists of vulcanised black elastic natural rubber with smooth running compound and the hardness of the tread is 65° - 75° Sh.A (COMFORT). The tread is very wear-resistant and the adhesion to the core is perfect. Because the tread is very elastic, the rolling properties are excellent even under maximum load. The aluminum core also makes the wheel resistant to peak loads. The wheel comes with mounting plate with the dimensions 135 x 110 mm. The axle hole diameter is 20 mm and the overall height of the castor wheel is 195 mm. This wheel has a tread width of 50 mm and the center distance of the mounting holes is 105 x 80/75 mm. The diameter of the mounting holes is 11 mm and the dimension of the inner

fork width is 63.5 mm. The construction of the castor wheel has a central kingpin, making it very suitable for regular peak loads! The weight of the castor wheel is 3.03 kg. In addition, this wheel can be mounted under every roll container and dolly in our range. The material of the fork (type: MD50) consists of galvanized steel and the temperature range is -20° C to + 70° C. This swivel castor is suitable for heavier transport vehicles or containers, such as waste containers. Would you like to know more about the different types of container wheels and tips when purchasing? Then read our blog about roll container wheels !
