Outside dimension width	60
Type	posts for Mobilracks

PRODUCT DESCRIPTION

Tube 1500mm for stacking racks

Tube to be used with a length of 1500mm, in combination with storage racks, such as racks and bigbag mobile racks. Thanks to the tubes, the racks can be stacked easily, and the desired gap can be realized. Stacked racks save a lot of space and storage costs. The tubes are completely plated. As a result, the tubes go against corrosion, they are scratch resistant and firmer. The diameter of the tube is 60 mm. When using these tubes to stack two storage racks from our range of each other, you must take into account that the intermediate space between two storage racks, the length of the tube is minus 8 centimeters. This intermediate space is created in that the tube slightly lowered in the rack which is standing on the ground, and the rack which stacked thereon slide back slightly over the tube.
