PRODUCT DESCRIPTION

Nestable, stackable plastic container with a 2-part hinged member. The container has the outside dimensions of 400x300x320mm and the inside dimensions of 345x270x305mm. The sidewalls and the base of the container are completely closed with a capacity of 28 litres. The carrying capacity of this tote box is 20kg. And you can stack up to 4 loaded boxes on top of each other with the load capacity of the stack being 80kg. This box can be used within a temperature range or -20 °C to +40 °C. When the lid is closed you can stack the boxes and when the boxes are empty they can be nested, saving you space during transport or storage. When nested the space-saving of these boxes is 74%. For

transport and storage, it is the most efficient way to place 261 plastic containers on 1 pallet or 1200x900x2550mm. This way 7830 pieces fit in a trailer.
