PRODUCT DESCRIPTION

Prestar Worktainer 1100x800x1700mm

This Prestar worktainer is provided with a plastic bottom. It is a rolling container which is foldable in L-shape, and then nestable with other mobile containers of this type. This construction allows you to save space when the worktainer is in storage or during return transport when not in use. On the front is the worktainer provided with a steel tube which can be attached to the side rails to each other, and that provides extra stability and makes the structure more strongly than other 3-witch roll containers which are only provided with roller container binders. It is also safer because they do not have the risk of shooting a loose trolley binder when working with it. Shelves are separately available for this roll container
